COOPER POWER SERIES

600 A 15 and 25 kV class deadbreak accessories, tools, and replacement parts

General

Eaton's Cooper Power™ series 600 A, 15 and 25 kV Class deadbreak accessories are used to connect and assemble 600 A products. When assembled to mating apparatus, deadbreak accessories provide fully shielded, submersible connections that meet the requirements of IEEE Std 386™-2006 standard – "Separable Insulated Connector Systems".

Interchangeability

Eaton's 600 A deadbreak connector components conform to the electrical, mechanical and dimensional requirements of IEEE Std 386™-2006 standard. In addition, they are designed to be interchangeable with those currently available from other major manufacturers also meeting the requirements of this standard.

Powering Business Worldwide

Production tests

Tests are conducted in accordance with IEEE Std 386™-2006 standard.

- AC 60 Hz1 Minute Withstand
  - 40 kV
- Minimum Partial Discharge Extinction Voltage
  - 19 kV

Tests are conducted in accordance with Eaton requirements.

- Physical Inspection
- Periodic Dissection
- Periodic Fluoroscopic Analysis

Table 1. Voltage Ratings and Characteristics

Description	kV
Standard Voltage Class	25
Maximum Rating Phase-to-Ground	15.2
AC 60 Hz 1 Minute Withstand	40
DC 15 Minute Withstand	78
BIL and Full Wave Crest	125
Minimum Partial Discharge Extinction Voltage	19

Voltage ratings and characteristics are in accordance with IEEE Std 386™-2006 standard.

Table 2. Current Ratings and Characteristics

Description	Amperes
600 A Interface Continuous	600 A rms
4 Hour Overload	900 A rms
Short Time	40,000 A rms symmetrical for 0.20 s
	27,000 A rms symmetrical for 4.0 s

Current ratings and characteristics are in accordance with IEEE Std 386™-2006 standard.

Threaded stud

The threaded stud is used with Eaton's Cooper Power series BOL-T™ connector or splices to connect reducing well plugs, deadbreak tap plugs, connecting plugs, and insulating plugs to other components or to apparatus bushings.

Figure 1. Threaded stud made of aluminum or optional copper.

Insulating plug

A one-inch socket and torque wrench are required to tighten the insulating plug into a de-energized deadbreak connector and mating apparatus. Refer to Installation Instruction Sheet S600-10-6 for details.

Capacitive test point allows circuit testing without disturbing the bolted connection. The one-inch hex head allows easy assembly to the connector and mating apparatus.

Semiconducting EPDM rubber cap fits over the test point for a waterproof seal and deadfront shielding.

Figure 2. Insulating plug with EPDM rubber cap.

Connecting plug (EPDM rubber)

A 5/16" hex wrench is used to tighten the connecting plug into a de-energized deadbreak connector or mating apparatus. Refer to Installation Instructions Sheet S600-10-2 for details.

Semiconducting collar provides continuity with semi-conducting shield of EPDM rubber of mating parts.

The versatile design can be used for connecting two or more 600 A deadbreak connectors or, with a bushing extender, to ease cable training by increasing the distance between an apparatus front place and 600 A connector.

Figure 3. Connecting plug (EPDM rubber) shown with stud.

Connecting plug (epoxy)

A spanner wrench is used to tighten the connecting plug into a de-energized deadbreak connector or mating apparatus.

- Semiconducting coating provides continuity of semiconducting shield with EPDM rubber of mating parts. Holes allow easy assembly using a spanner wrench.
- Versatile design can be used for connecting two or more 600 A deadbreak connectors or, with a bushing extender, to ease cable training by increasing the distance between an apparatus front plate and a 600 A connector.

Figure 4. Connecting plug (epoxy) shown with stud.

Compression connector

Compression connectors are available in all aluminum or friction welded coppertop designs, aluminum with unthreaded holes and coppertop with either threaded or unthreaded holes. See Tables 3 and 4 for proper application. All connectors have aluminum crimp barrels and are designed for use with either aluminum or copper conductors.

Figure 5. Compression connector.

BOL-T™		✓	✓
BT-TAP™		✓	✓

Shear bolt connector (optional)

Bolted cable lug is fitted with stepless bolts, which shear off when optimum contact force has been reached. Provides electrical continuity for copper and aluminum conductors while eliminating need for dies and compression tools. Available in unthreaded aluminum for Eaton's Cooper Power series BOL-T and BT-TAP™ connector applications only. See Table 5 for proper application.

Cable adapter

Molded cable adapter is available in sizes to fit cables from .610" to 1.970" in diameter (15.5 to 50.0 mm). It is molded of high quality peroxide cured insulation and semiconductive rubber to provide stress relief for terminated cable.

Figure 7. Cable adapter

Ordering Information

Cable Adapters

These adapters are for use on Eaton's Cooper Power series BOL-T, BT-TAP, T-OP II and PUSH-OP™ connector systems. To select the correct adapter, determine the minimum and maximum diameter over insulation for the cable as shown in Figure 8. Then reference Table 6 to select the adapter whose range completely covers the minimum and maximum diameters. Complete the catalog number CA625_ by determining the cable range code for digit 6.

Example: For a cable with nominal insulation diameter of 1.200" and a tolerance of ± .030 inch:
1.200" - .030" = 1.170

1.200" + .030" = 1.230

From Table 6, select adapter CA625EE.

Table 6. Cable Diameter Range

Cable Diameter Range		
Inches	**mm**	**Code**
0.610-0.970	15.5-24.6	AB
0.750-1.080	19.1-27.4	CC
0.970-1.310	24.6-33.3	DD
1.090-1.470	27.7-37.3	EE
1.260-1.640	32.0-41.7	FF
1.360-1.710	34.5-43.4	GG
1.510-1.850	38.4-47.0	HH
1.700-1.970	43.2-50.0	JJ

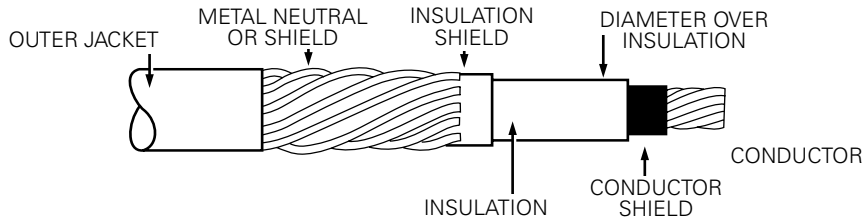

Figure 8. Cable illustration showing conductor and insulation layers.

200 A 15/25 kV deadbreak reducing tap plug

A spanner wrench is used to tighten the insulating deadbreak tap plug into a de-energized deadbreak connector and mating apparatus.

- Semiconducting coating provides continuity of semiconducting shielding with mating EPDM rubber mating parts. Holes allow easy assembly with mating apparatus using a spanner wrench. Tab holes allow use of a holddown bail with the 200 A, 15, and 25 kV Class deadbreak elbow connector.
- 200 A interface accommodates a 200 A, 15 kV and 25 kV deadbreak elbow.

Figure 9. 200 A 15/25 kV deadbreak reducing tap plug.

Spanner wrench

The spanner wrench is required to assemble or disassemble 600 A, 15 kV and 25 kV Class epoxy connecting plugs and deadbreak reducing tap plugs from T-bodies and other apparatus.

Figure 10. Spanner wrench.

Operating and Test Tool (O & T Tool)

The operating and test tool is used with a clampstick to test or operate LRTP-equipped connector. The standard tool is equipped with a molded EPDM cap that latches onto the 200 A interface of the LRTP for clampstick operation.

Figure 11. Operating and test tool.

Torque tool

The torque tool is used to properly torque LRTP-equipped connectors onto bushing. It can be hotstick-operated.

Figure 12. Torque tool.

Operating and test/torque tool (O & T/torque tool)

This tool combines the benefits of the O & T and torque tools into one convenient clampstick-operable tool. Used with LRTP-equipped connectors, the EPDM cap latches to the 200 A interface for clampstick operation. The integral torque limiter allows the operator to properly torque connectors without changing tools.

Figure 13. Operating and test/torque tool.

T-WRENCH

The T-wrench is used to install an LRTP into a connector. It is a T-handled, 5/16" hex wrench.

Figure 14. T- Wrench.
